

## PROPOSAL DEVELOPMENT

### Module 6 Lesson 5.4 – Logical Framework example

Project Description	Performance Indicators	Means of Verification	Assumptions
<b>Goal:</b> The broad impact that the project will contribute to at a sectoral/national level	Measures the project's contribution toward meeting the goal; for evaluation purposes	Data sources and collection methods	High level assumptions; typically focused on external factors
<b>Purpose:</b> The expected outcome toward which all program components are aimed	Determines that the purpose of the project has been achieved and results are sustainable; for project completion and evaluation	Data sources and collection methods	Project-level assumptions; typically focused on external factors
<b>Objectives:</b> The expected outcome from each output	Determines attainment of component objectives; for review and evaluation	Data sources and collection methods	Objective-level assumptions; typically focused on external factors
<b>Outputs:</b> The direct results (goods and services) which are measured by the project	Measures quantity, quality and timing of outputs; for monitoring and review	Data sources and collection methods	Output-level assumptions; typically focused on conditions needed for outputs to be completed
<b>Activities:</b> The project tasks that deliver outputs	Measures program targets; for monitoring	Data sources and collection methods	Activity-level assumptions; typically focused on the conditions needed for activities to be carried out
